

EVERGREEN ACHIEVES NEW TÜV QUALITY CERTIFICATION

Evergreen Solar announces it has received the prestigious TÜVdotCOM quality certification for its solar panels for both the German and American facilities which manufacture Evergreen products.

The test procedures for this certification contain two major components:

First, at the accredited laboratory of TÜV Rheinland, tests are performed on selected test samples to verify that they are in accordance with the relevant standards and requirements - in this case IEC 61215:2005, Edition 2.

Second, TÜV experts perform periodic quality and production control at Evergreen Solar manufacturing sites. This ensures that all the PV modules produced are manufactured with the same materials and processes and at the same quality level as the test samples tested in the TÜV laboratory.

This mark offers you security and confidence that Evergreen products have been certified to the highest standards. It is a mark of reliability and competence that you can rely on. And it protects against false claims of certification.

The www.tuvdotcom.com website provides ready access for you to reference Evergreen Solar's records and the corresponding certificates and relevant details pertaining to the I.D. number located at the bottom of the mark.

Evergreen Solar is committed to delivering high performance products with superior quality. TÜVdotCOM certification provides another independent verification of the high quality standards to which we operate.

THE END
